PROFESSIONAL SUMMARY

Business Intelligence and Analytics leader with 5+ years turning ambiguous operational questions into decisions and measurable business impact across 9+ Sub-Saharan African markets. Lead a 4-analyst team as the data partner to Commercial, Field Operations, Customer Experience, and Logistics, with dashboards used from the CEO down. Built IRIS, a fraud-detection, evidence-review, and distribution-mapping platform now used as BURN's gold-standard evidence base for investor due diligence — driving a 7% lift in repayment efficiency, confirming 3% of flagged sales as fraudulent, and lifting distribution compliance from ~70% to 94% through an IRIS-informed team restructuring. Comfortable owning a question end to end: scoping it, building the model or pipeline myself (Python, SQL, PySpark, AWS), and landing the recommendation with executives and investors.

EXPERIENCE

BURN Manufacturing — Nairobi, Kenya

Data Analytics Manager *Nov 2025 – Present*

Lead a team of 4 analysts as the data partner to Commercial, Sales Ops, Customer Experience, and Logistics across BURN's biomass and electric cookstove businesses in 9 markets.

- Designed and led development of IRIS, a fraud-detection, field-evidence review, and distribution-mapping platform used company-wide across 9 markets, replacing ad-hoc manual sampling with daily anomaly scoring of every field record; now BURN's gold-standard evidence base for investor due diligence.
- Drove measurable business outcomes from IRIS: a 7% increase in repayment efficiency within 2 months of adoption, 3% of flagged sales confirmed fraudulent, and distribution compliance lifted from ~70% to 94% following an IRIS-informed team restructuring.
- Automated commission calculations for ~1,400 field agents, cutting processing time from 2 weeks to 3 days.
- Own executive dashboards and KPI frameworks used by the CEO, commercial directors, heads of department, and managers across Commercial, Field Operations, CX, and Product, cutting lead time on key commercial decisions from days to hours; supported departments rate data's contribution 4.5/5.
- Set data governance standards giving 100% of critical datasets a named owner, documentation, validation checks, and lineage, sustaining ≥97% accuracy and cutting data incidents by 75% year on year.
- Led market sizing and expansion analysis (TAM, SAM, SOM) across Nigeria, Zambia, Malawi, and Ethiopia, evaluating competitive landscape and remaining addressable opportunity to guide market entry, inform production planning, and set commercial targets.
- Set the data OKRs and roadmap for Commercial, Field Ops, and CX in quarterly and annual planning.
- Designed and ran an A/B test of stove end-user data collection methods (remote call surveys, in-person field visits, dMRV sensor-based data) to identify the most reliable and cost-effective approach for measuring usage and impact.
- Led development, training, and deployment of a supervised computer vision model to improve field data quality and strengthen compliance with stricter investor obligations.

Data Analytics Lead *Jan 2023 – Nov 2025*

- Led delivery of analytics and decision-support tools across sales, operations, logistics, and finance, enabling leadership to track performance and identify emerging trends.
- Built integrated data models combining ERP, CRM, warehouse, and field data (Postgres, AWS, PySpark) to provide a unified view of operations and demand signals.
- Developed scalable data pipelines (Python, R, AWS) to standardize and automate multi-source data, improving consistency and usability of insights.

- Introduced validation frameworks and monitoring systems that reduced data inconsistencies and improved supply visibility across multiple countries.

Business Intelligence Analyst *Jan 2020 – Jan 2023*

- Developed 15+ Power BI dashboards used for operational tracking, logistics performance, and management decision-making.
- Automated 90% of recurring reporting, significantly improving reporting speed and consistency.
- Built an interim data warehouse that reduced reporting turnaround time by 90%, enabling faster decision cycles.

Dalberg Research — Nairobi, Kenya

Data Processing Officer *Apr 2017 – Sep 2019*

- Designed and deployed data collection systems (KoboCollect, SurveyToGo, ODK) across multiple African countries.
- Conducted data cleaning, validation, analysis, and reporting to support program evaluation and operational decision-making.
- Supported geo-spatial analysis projects to enhance planning, targeting, and operational efficiency.

EDUCATION

MSc Data Science (In Progress) *2024 – 2026*
University of East London

BSc Statistics *2014 – 2018*
Jomo Kenyatta University of Agriculture and Technology

SKILLS & CERTIFICATIONS

- Leadership & Planning: people management (team of 4), data OKRs and roadmaps, process automation, data literacy training, data lineage and stewardship.
- Programming & Analytics: Python (PySpark, Pandas, FastAPI), R, SQL/PostgreSQL — statistical modeling, forecasting, classification, and clustering applied pragmatically to operational business questions.
- Visualization: Power BI, Tableau, Metabase, Kepler.gl.
- Data Systems: AWS (Lambda, S3, RDS, API Gateway, CloudFront), data pipelines, Postgres data warehousing, MS Dynamics Central.
- Data Collection: KoboCollect, ODK.
- Certifications: Data Strategy & Governance (PMI), Communicating with Executives (PMI), Decision & Risk Management Professional (PMI), Data Visualization (Tata Consultancy Services).
- Memberships: Royal Statistical Society; Kenya National Statistical Society.
